L94 ANSWER 1 OF 46 HCPLUS COPYRIGHT 2007 ACS on STN DUPLICATE 2

ACCESSION NUMBER: 2004:1010285 HCPLUS Full-text

DOCUMENT NUMBER: 142:16720

TITLE: Intrathecal clonidine inhibits mechanical
 allodynia via activation of the spinal
 muscarinic M1 receptor

AUTHOR(S): in streptozotocin-induced diabetic mice

AB We examined the involvement of the spinal muscarinic receptors in the clonidine-induced antiallodynic effects. Mech. sensitivity was assessed by stimulating the hind paw with von Frey filaments. In streptozotocin-treated (200 mg/kg, i.v.) diabetic mice, hypersensitivity to mech. stimulation appeared 3 days after streptozotocin administration, and persisted for 11 days. This mech. hypersensitivity (allodynia) was inhibited by the intrathecal (i.t.) injection of clonidine. The muscarinic receptor antagonist atropine (i.t.) and α 2-adrenoreceptor antagonist yohimbine (i.t. or s.c. injection) abolished the antiallodynic effect of clonidine. The effect was mimicked by the muscarinic M1 receptor antagonist pirenzepine, but not by the muscarinic M2 receptor antagonist methoctramine or the muscarinic M3 receptor antagonist 4-DAMP (4-diphenyl-acetoxy-N-methylpiperidine methiodide). In addition, the mech. hypersensitivity in diabetic mice was reduced by the selective muscarinic M1 receptor agonist McN-A-343 (4-(m-chlorophenyl-carbamoyloxy)-2- butynyltrimethylammonium chloride) (i.t.). These results suggest that spinal muscarinic M1 receptors participate in the antiallodynic effect of clonidine in diabetic mice.
